Epsom Salt

THE SALT OF THE EARTH

Many soils in different parts of the United States are naturally lacking in certain minerals and nutrients. Epsom Salt (hydrated magnesium sulfate) provides two nutrients that are essential to the development of vigorous plants – magnesium and sulfur.

Magnesium is crucial to cell wall development and aids in a plant's uptake of essential nutrients, such as nitrogen, phosphorus and sulfur. Sulfur is a beneficial soil additive that corrects alkalinity and helps prevent sulfur deficiency.

When your soil is lacking magnesium or sulfur the problem can manifest itself in many ways. Plants suffering from magnesium and/or sulfur deficiency often experience a yellowing of their leaves. Fruits and vegetables may fail to achieve their full color, flavor and yield. Flowers may produce insignificant blooms.

Pennington® Epsom Salt plant nutrient now puts the secret to successful gardening in your hands. As a soluble source of magnesium and sulfur it will help you achieve better plant growth and increased yields. This all-natural formulation is the purest Epsom Salt that is available. And it is safe and non-toxic to people, pets and the environment.

Store in a cool, dry place out of direct sunlight.
KEEP OUT OF REACH OF CHILDREN.
